```

is it really true for x86?

```
>
> Hot-unplug of vCPU results in destruction of the vCPU object in QOM but the
> corresponding KVM vCPU object in the Host KVM is not destroyed and its
>
>
```

since KVM doesn't support vCPU removal

```
> representative KVM vCPU object/context in Qemu is parked.
>
> Refactor common logic so that some APIs could be reused by vCPU Hotplug code.

```

Suggest to move it to a series that actually will use this patch.

```
